**Take Home Message  
Methanogenesis**

- Methanogenesis is the biological production of  $CH_4$  from either  $CO_2$  plus  $H_2$  or from methylated compounds.
- A variety of unique coenzymes are involved in methanogenesis, and the process is strictly anaerobic.
- Energy conservation in methanogenesis involves both proton and sodium ion gradients.
- Only *Archaea* are able to pull this weird metabolism off.
