## **Evolutionary Biology**

### **BI 432**

## **Dr. Craig Moyer**

## What is Evolution?

- Change over time via descent with modification and often diversification from common ancestors.
- Latin for unfold or unroll
- English for change
- Unifying theory of biology

#### **The Universal Tree of Life**

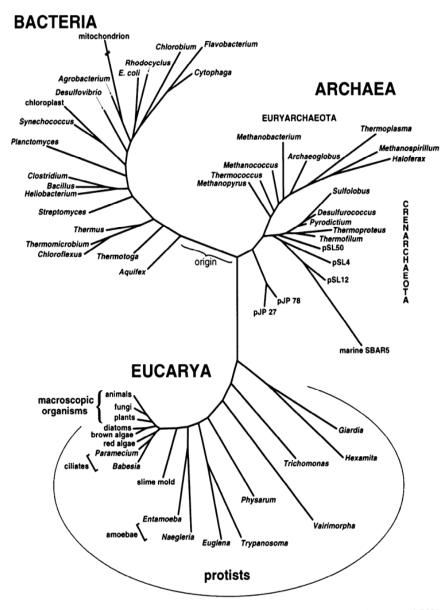

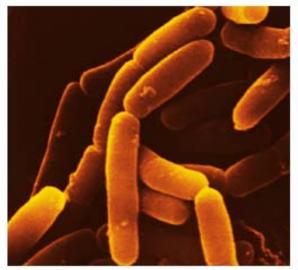

Figure 1. Diagrammatic "Universal" phylogenetic tree of life, based on small-subunit ribosomal RNA sequences. Based on analyses of Barns et al. (1996b), Olsen et al. (1994), and Sogin (1994).

#### Examples of the three Domains of Life

Bacteria

Archaea

Protista

Plantae

Fungi

Animalia

## What is Evolutionary Biology, and Why Is It Important?

• Fundamental Observations: Diversity and Adaptation

- Evolution as Explanation of Biology
- Evolution as Fact and Theory

## **Fundamental Observations: Diversity and Adaptation**

1. Diversity of all characteristics & forms

2. Changes in diversity

3. Apparent "good fit" of organisms to the environment

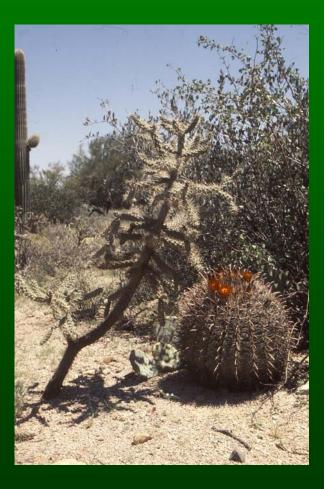

Why do some species vary so much from place to place, while others hardly vary at all?

Courtesy of R.F. Denno

# Why do the form and function of organisms fit their environment so well?

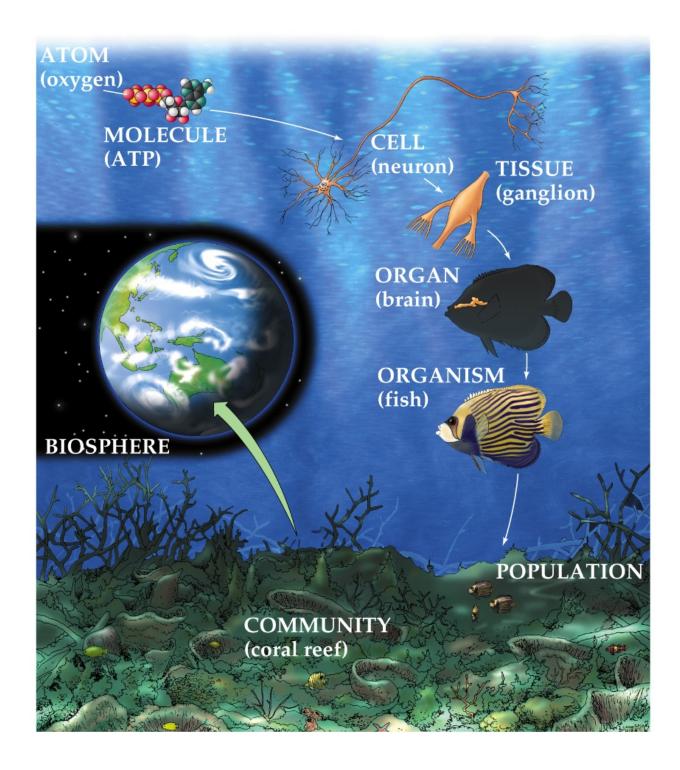

#### **Evolution as Explanation of Biology:**

1. Levels of organization in biology: From molecules to populations and beyond

2. Proximate and ultimate causation

3. The concept of fortuitous contingency

4. Testable hypothesis using scientific method

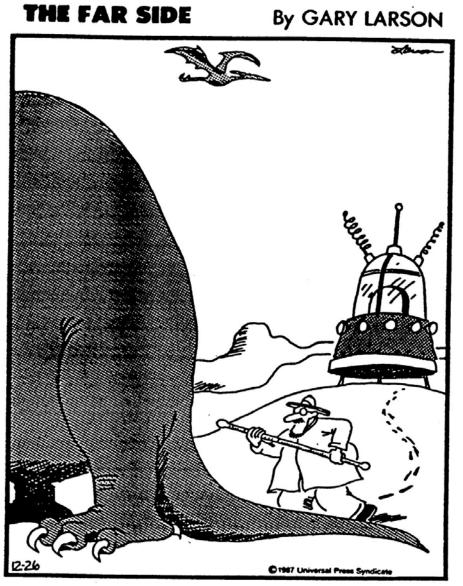

# **Proximate vs. Ultimate Causation**

• Why do birds sing in the spring?

http://www.birdphotography.com/

An instant later, both Professor Waxman and his time machine are obliterated, leaving the cold-blooded/warm-blooded dinosaur debate still unresolved.

**Evolution as Fact and Theory:** 

1. Change over time

2. Descent with modification

3. Evolution by <u>natural selection</u>

N.S. = Mechanism of sorting individuals among hereditary variations.

#### Why do fossils from different sedimentary layers differ as they do?

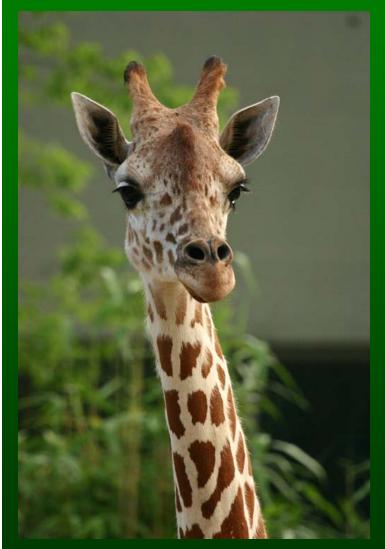

#### BIFs aka Banded Iron Formations

Why Should We Care about Evolutionary Biology?

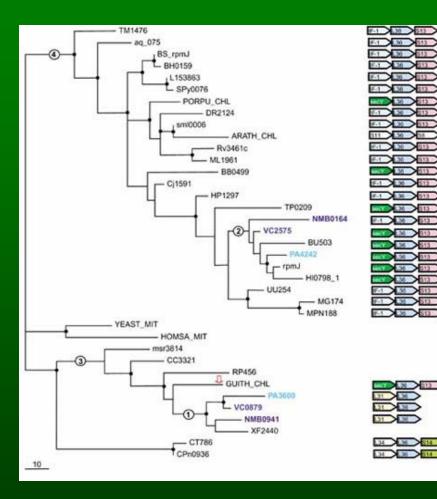

- It illuminates our understanding of nature.
- It illuminates our understanding of ourselves.
- It helps answer questions in conservation biology.
- An evolutionary understanding can be used to improve the human condition.

#### How have the various animal body forms evolved?

#### Why are some genes remarkably similar among organisms?

MKVOASVK --- KRCEHCKIIRRKKRVYVICKVNPKHNOKOG

Phylogenetic tree, conserved gene context and multiple alignment of L36 ribosomal proteins. A maximum-likelihood unrooted tree was built using the MOLPHY program. Those branches that were supported by bootstrap probability greater than 70% are marked by small black circles.

#### How did complex cell structures evolve?

#### Why do organisms have sex sometimes at great cost?

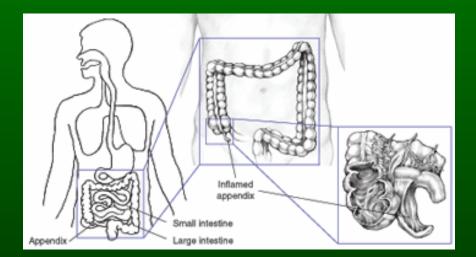

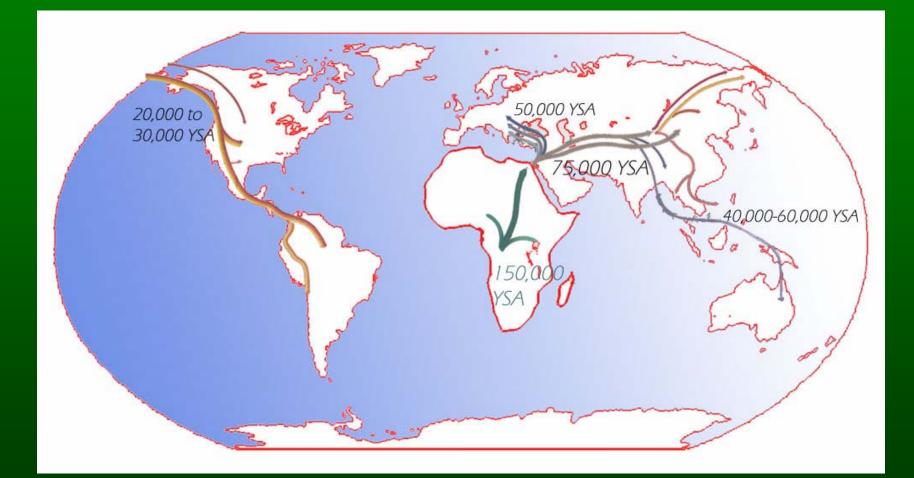

# Why do organisms get old and die?

#### **Evolutionary biology helps us understand our quirks...**

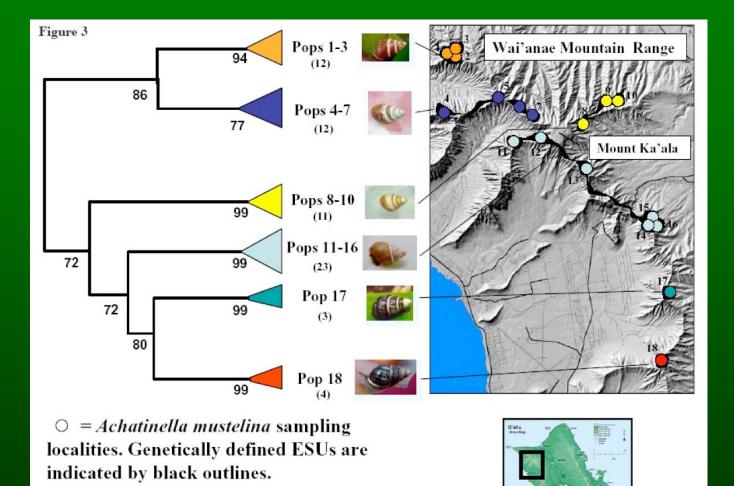

#### ...and how we peopled the earth.

#### Which organisms are distinct enough to warrant protection?

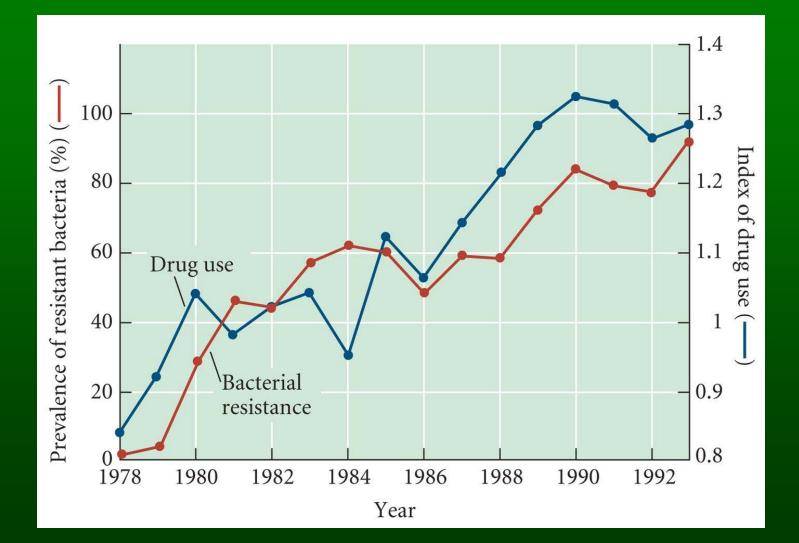

Holland & Hadfield, 2002 Molecular Ecology 11(3), 365-376

ESU = Evolutionary Significant Unit

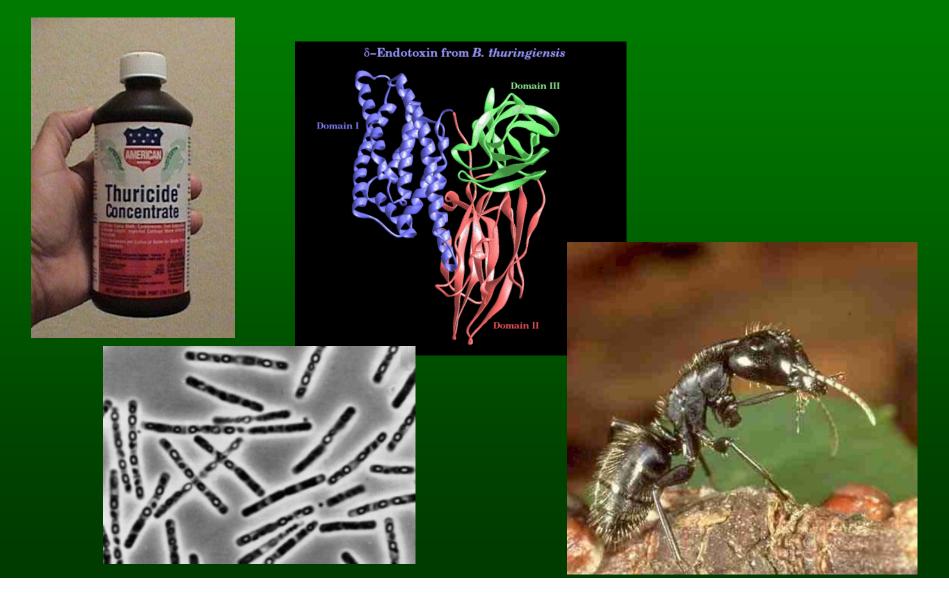

#### How should we maintain genetic variation?

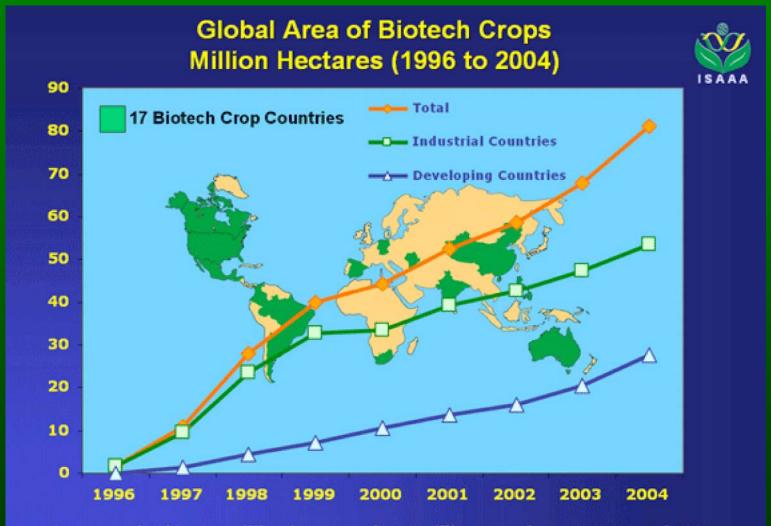

# **Evolutionary biology explains why** *Moraxella* **bacteria become resistant to antibiotics so quickly.**

Similarly, evolutionary biology helps guide efforts to slow the evolution of pesticide resistance in insects.

# Evolutionary biology may help minimize the risks of transgenic crops.

Increase of 20%, 13.3 million hectares of 32.9 million acres between 2003 and 2004 Source: Clive James, 2004
