## **BI 516 – Advanced Ecosystem Ecology and Global Change**

#### MF 1-2 (AIC West 408), W 1-4 (Biology Rm. 415)

Winter 2010

Instructor: David HooperOffice: Biology 307Phone: 650-3649Email: hooper@biol.wwu.eduOffice Hours:M 2-3, F 2-3, or by appointment.Web site:http://fire.biol.wwu.edu/hooper/courses.htmlText:Chapin, Matson, and Mooney "Principles of Ecosystem Ecology"

#### NATURE OF THE COURSE:

Ecosystem ecology involves the study of energy and material flows through both the living (plants, animals, microbes) and non-living (water, soils, atmosphere) components of ecological systems. We will study the major element cycles (carbon, nitrogen, phosphorus) and patterns of energy flow through ecosystems, including differences among those fluxes and their controls for different ecosystems. A central theme of the course is the relationship of these ecosystem processes to many current environmental issues of global importance, such as elevated CO<sub>2</sub>, global warming, enhanced nitrogen cycling, and loss of biodiversity.

This seminar course will combine both lectures and discussions. The lectures, combined with readings from the textbook, are intended to give you a fundamental understanding of ecosystem concepts and theory. On Wednesdays, we will discuss papers from the current literature relevant to the topic from the previous lectures.

The goals of this course are to

1) give you a firm understanding of the concepts and mechanisms of ecosystem ecology;

2) improve your abilities to **lead and participate in discussion** of scientific literature, including **developing skills** in critical thinking;

3) **introduce you to the primary literature** and some of the current "hot topics" being studied and debated in the field;

4) **enhance your understanding** of how human society is altering ecosystems, some of the problems that entails, and some of the solutions that might be possible.

#### **COURSE GRADE:**

1. Your grade will be based on a total of 350 possible points:

**a. Lead two discussions**. 100 points (50 points each). You will be the discussion leader for two classes. One lead will be solo, the second will be with one other student. Discussion leadership will entail several steps for preparation. You will need to prepare a set of questions to help focus the discussion (to be handed out at class time) and do additional background reading in the primary literature necessary to prepare yourself as an effective class leader (supply an annotated bibliography, 6 reference minimum in addition to the assigned articles). For co-led discussions your annotated bibliography should not overlap with that of your co-leader.

**b.** Discussion attendance and participation. 30 points. Discussion attendance and participation are mandatory and constitute an important component of this class. Failure to attend (without a pre-approved excuse) or to participate in discussion regularly will result in loss of 3 points per discussion missed. Missing more than 5 discussions results in loss of all 30 points.

c. Exams: 2 Midterms (60 points each) and a comprehensive final exam (100 points).

**d.** Late assignments lose 1/3 grade per day (i.e., going from a B+ to a B).

**e.** Academic dishonesty will not be tolerated. Assignments with plagiarism problems or cheating on exams can result in no credit, failing the class, or expulsion from the university. Questions about plagiarism? Ask me and/or see Western's web sites: <a href="http://www.library.wwu.edu/ref/plagiarism.html">http://www.library.wwu.edu/ref/plagiarism.html</a>.

2. Tour mar grade will be determined as a percentage of the point tour.										
		B+	87-89.9	C+	77-79.9	D+	67-69.9	F	0-59.9	
А	93-100	В	83-86.9	С	73-76.9	D	63-66.9			
A-	90-92.9	B-	80-82.9	C-	70-72.9	D-	60-62.9			

2. Your final grade will be determined as a percentage of the point total:

# BI 516 - Class schedule

Readings listed as CMM are chapters from the Chapin, Matson, and Mooney textbook. Discussion readings are from the primary literature (see reading list, below).

Discuss	ion readings	are nom the primary merature (see reading list, below).	
Week	Date	Topic	Reading
1	W. 1/6	Course introduction, The Ecosystem Concept	CMM: 1
	F. 1/8	Climate	CMM: 2
2	M. 1/11	Climate (con't)	CMM: 2
	W. 1/13	Overview of the Carbon Cycle, Productivity	CMM: 15 (335-343), 6
	W. 1/13	Discussion 1 – Ecosystem concept. climate (one leader)	(Vitousek 1994, Brook 2005)
	F 1/15	Controls on Gross Primary Productivity	CMM: 5
3	M 1/18	No Class – Martin Luther King, Jr. Day	
5	W 1/20	Controls on Gross Primary Productivity	CMM: 5
	, 1/20	Paper topics due	
	W, 1/20	Discussion 2 – Carbon cycle 1 (one leader)	(Oberbauer et al. 2007)
	F, 1/22	Controls on Net Primary Productivity	CMM: 6
4	M, 1/25	Controls on Net Ecosystem Productivity	CMM: 6
	W, 1/27	Decomposition	CMM: 7
	W, 1/27	Discussion 3 – Carbon cycle 2 (2 leaders)	(Wardle et al. 2004, Kitayama 2005,
			Wardle et al. 2005)
	F, 1/29	Midterm 1	· · · · · · · · · · · · · · · · · · ·
5	M, 2/1	Decomposition	CMM: 7
	W, 2/3	Decomposition	CMM: 7
	W, 2/3	Discussion 4 – Decomposition (one leader)	(Finzi and Schlesinger 2002)
	F, 2/5	Terrestrial nutrient cycles – nitrogen	CMM: 15 (343-348), 9
6	M, 2/8	Terrestrial nutrient cycles – nitrogen	CMM: 9
	W, 2/10	Nutrient cycling – Plant nutrient use	CMM: 8
	W, 2/10	Discussion 5 – Nutrient cycling 1 (two leaders)	(Helfield and Naiman 2001, Helfield
			and Naiman 2003, Kirchhoff 2003)
	F, 2/12	Nutrient cycling – Plant nutrient use	CMM: 8
		Paper first drafts due	
7	M, 2/15	No Class – President's Day	
	W, 2/17	Trophic dynamics	CMM: 4 (71-77), 11
	W, 2/17	Discussion 6 – Nutrient cycling 2 (no leader)	(Funk and Vitousek 2007)
	F, 2/19	Trophic dynamics	CMM: 4 (71-77), 11
		Students finish commenting on first drafts	
8	M, 2/22	Community effects on ecosystem properties	CMM: 12
	W, 2/24	Community effects on ecosystem properties	CMM: 12
		First drafts handed back	
	W, 2/24	Discussion 7 – Trophic dynamics (one leader)	(Finlay and Vredenburg 2007)
	F, 2/26	Midterm 2	
9	M, 3/1	Community effects on ecosystem properties	CMM: 12
	W, 3/3	Temporal dynamics: Disturbance and succession	CMM: 13
	W, 3/3	Discussion 8 – Biodiversity and ecosystem functioning	(Thompson et al. 2005; Cardinale et
		(2 leaders)	al. 2007)
	F, 3/5	Temporal dynamics: Disturbance and succession	CMM: 13
10	M, 3/8	Synthesis: Managing Ecosystems	CMM: 16
	W, 3/10	Synthesis: Managing Ecosystems	CMM: 16
	W, 3/10	Discussion 9 – Disturbance (one leader)	(Balshi et al. 2009)
	F, 3/12	Discussion 10 – Ecosystem Services and Managing	(Nelson et al. 2009)
		Ecosystems (one leader)	
4.5		Final drafts due	
11	W, 3/17	Final Exam – 10:30 a.m. – 12:30 p.m.
