Extra Credit:
No points taken off for incorrect answers.

(Based on a question submitted by a Bio 101 student)

What are the chances that two dark-haired parents would have a red-head and a blonde as children?

In class, we determined what the genotypes of the parents would be and that this information would be used to construct a Punnett square for a dihybrid cross. For full credit, you will need to report the chance of having both a red-head and a blonde from these parents.

In order to receive credit, please submit your answer showing all work.

Due Date: Monday, November 19th.
